

AstralPool Net 'n' Clean In Floor Cleaning

- ✓ Automatically cleans the pool
- ✓ Improved water circulation
- ✓ Improves water chemical distribution
- ✓ Improves distribution of heated water
- ✓ Reduces pool maintenance
- ✓ Eliminates unsightly hoses and moving cleaners from your pool

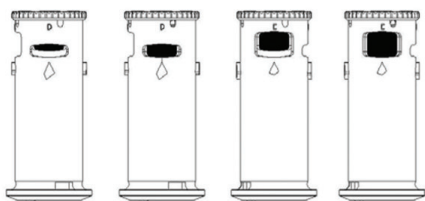

AstralPool Net 'n' Clean In Floor Cleaning

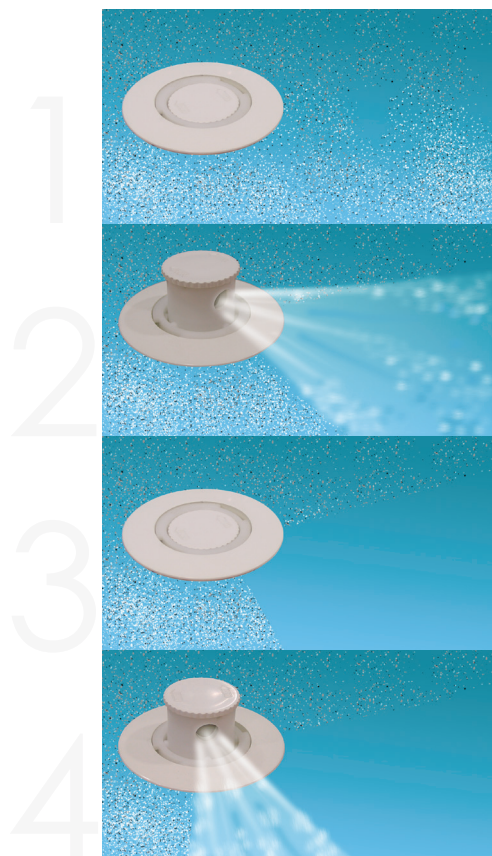

Your swimming pool is not just a place to escape the summer heat, but is the centre piece of your back yard oasis. Aside from providing the ideal exercise medium, your pool is often the focus for family and friends. So why not have it looking pristine all the time? Swimming pools always look their best with sparkling water free from dirt, leaves, cleaners and hoses.

How does Net 'n' Clean work?

The Net 'n' Clean system is comprised of a series of nozzles installed in the bottom of the pool (the number of nozzles will depend on the pool size and shape) as well as one or more distribution valves that direct pressurised water through each nozzle branch sequentially. Water flows out at high pressure through the nozzles and forces the debris to the main suction while lifting fine particles into suspension where they are collected by the skimmer and deposited into the filtration system.

With AstralPool's Net 'n' Clean in floor pool cleaner you can have a cleaning system that is virtually invisible, automatic and totally integrated into your filtration system. Every day, up to 99% of your pool, including steps and swim outs is automatically cleaned, removing leaves and debris.

What's Unique about AstralPool's In floor Cleaning System?

The Distribution Valve is hydraulically driven and systematically controls the sequence of the nozzles to ensure that all debris moves towards the main drain to be collected by the filtration equipment.

The operation time for each outlet is simply adjusted via an easily accessible control knob which allows the system to be tailored to your pool. Made of corrosion proof materials, the distribution valve is easy to maintain with no special assembly tools required and a minimum number of internal parts.

A unique Riser Pipe combines with the nozzles for installation in concrete pools and allows easy alignment and leveling of the nozzles for the perfect finish in your pool.

AstralPool's in floor nozzles are available for concrete, fiberglass or vinyl liner pools. A unique system of rotating the nozzle assembly allows the installer to select a different pressure and flow rate from each individual nozzle to perfectly suit the location in the pool – floor, steps, swim out or spa. The nozzles incorporate a ball and socket function that allow for perfect alignment on sloping floors. And depending on your taste nozzles are available in six colours to match your pool interior.

AstralPool's unique Hydrospin is a bagless, cyclone filter device that should be installed between the pump and the distribution valve. Hydrospin will filter down to 40 microns while protecting the internals of the distribution valve from abrasion and wear caused by fine particles and debris. Best of all, the Hydrospin is easily emptied in 5 seconds with the turn of a valve while the pump is running.

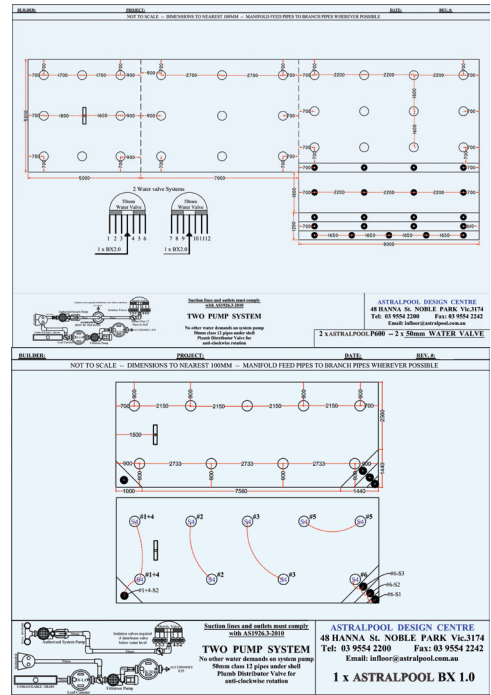

Complete Engineering

AstralPool also offer a free design service through our dealers to plan the exact location each nozzle is installed in the pool to obtain the ultimate cleaning result.

Combined with the AstralPool's Connect 10 Pool and Spa Controller, your whole pool filtration and in floor cleaning system is easily integrated for perfect cleaning while maximising energy savings.

Connect 10 internet gateway allows you to control your pool via your smart phone, tablet or computer from anywhere in the world and can communicate and give control over sanitizing, water balance, temperature, lighting and operating hours.
